BILATERAL MEETINGS

(01:00 p.m. - 04:00 p.m.)

DESCRIPTION We produce and have developed a unique decontamination system incorporating our exclusive 'dry' misting technology combined with a new harmless biocide which enables us to eradicate 99.9999% of all known pathogens in the air and on all surfaces. The biocide is safe to humans, plants and animals, yet lethal to dangerous micro-organisms. Our misting machines produce a minute particle of just 1.2 microns (we think this is the smallest in the world), which allows the mist to stay in the air longer and fill an entire room or vehicle to decontaminate the air and every surface, including all of those areas that are difficult to reach, like ducts, behind cabinets, under tables and more. Our products are in increasing demand in all sectors including healthcare, veterinary, food & beverage (safe to use in this environment), hotel and leisure, kindergartens, transport, including cruise ships and luxury yachts and more. Indeed, the biocide can even be used to extend the shelf-life of fruit, vegetables and meat and is grabbing the interest of many large retail chains and food producers in a number of countries. We are offering Master and sub-license opportunities and are particularly keen to meet potential Master Licensees (individuals or companies) who can develop a country or larger region. We already operate in multiple countries in Europe and Asia, with deals pending in the USA, France, Russia and China. We provide successful franchisees with exclusive access to our unique products, systems, training, marketing and ongoing support. We have a number of new

products in development, which will increase the opportunity substantially.
